

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-29 (Canceled).

Claim 30 (Currently Amended): An information storage medium which when used by a digital recorder/player causes the digital recorder/player to record or reproduce a content of the information storage medium, comprising:

an audio recording area configured to store audio information of one or more tunes or one or more pieces of music in unit of a given track, and

a management area configured to store management information with respect to the track of said audio information, said management area including program chain information configured to control a reproduction sequence of said audio information, said program chain information separately including cell information and program information configured to manage said tune or music, said program information being different from said cell information, said program information including representative picture information, and said representative picture information including entry number information configured to describe an entry number of a still picture object in which a representative picture for the track exists.

Claims 31-35 (Canceled).

Claim 36 (Previously Presented): A method of recording audio information on a medium which comprises an audio recording area configured to store audio information of one or more tunes or one or more pieces of music in unit of a given track, and a management area configured to store management information with respect to the track of said audio information, said management area including program chain information configured to

control a reproduction sequence of said audio information, said program chain information separately including cell information and program information configured to manage said tune or music, said program information being different from said cell information, said program information including representative picture information, and said representative picture information including entry number information configured to describe an entry number of a still picture object in which a representative picture for the track exists, said method comprising:

recording the audio information in the recording area; and

recording the management information including said related information and said cell information in the management area.

Claim 37 (Previously Presented): A method of reproducing audio information from a medium which comprises an audio recording area configured to store audio information of one or more tunes or one or more pieces of music in unit of a given track, and a management area configured to store management information with respect to the track of said audio information, said management area including program chain information configured to control a reproduction sequence of said audio information, said program chain information separately including cell information and program information configured to manage said tune or music, said program information being different from said cell information, said program information including representative picture information, and said representative picture information including entry number information configured to describe an entry number of a still picture object in which a representative picture for the track exists, said method comprising:

reproducing the management information including said related information and said cell information from the management area; and

reproducing the audio information from the recording area.

Claim 38 (Previously Presented): An apparatus for recording audio information on a medium which comprises an audio recording area configured to store audio information of one or more tunes or one or more pieces of music in unit of a given track, and a management area configured to store management information with respect to the track of said audio information, said management area including program chain information configured to control a reproduction sequence of said audio information, said program chain information separately including cell information and program information configured to manage said tune or music, said program information being different from said cell information, said program information including representative picture information, and said representative picture information including entry number information configured to describe an entry number of a still picture object in which a representative picture for the track exists, said apparatus comprising:

- a first block configured to record the audio information in the recording area; and
- a second block configured to record the management information including said related information and said cell information in the management area.

Claim 39 (Previously Presented): An apparatus for reproducing audio information from a medium which comprises an audio recording area configured to store audio information of one or more tunes or one or more pieces of music in unit of a given track, and a management area configured to store management information with respect to the track of said audio information, said management area including program chain information configured to control a reproduction sequence of said audio information, said program chain information separately including cell information and program information configured to

manage said tune or music, said program information being different from said cell information, said program information including representative picture information, and said representative picture information including entry number information configured to describe an entry number of a still picture object in which a representative picture for the track exists, said apparatus comprising:

a first unit configured to reproduce the management information including said related information and said cell information from the management area; and

a second unit configured to reproduce the audio information from the recording area.
